

BRC meeting of National Recording Schemes

Saturday 7th March 2020, National Museum Scotland

Recording wildlife for a very long time

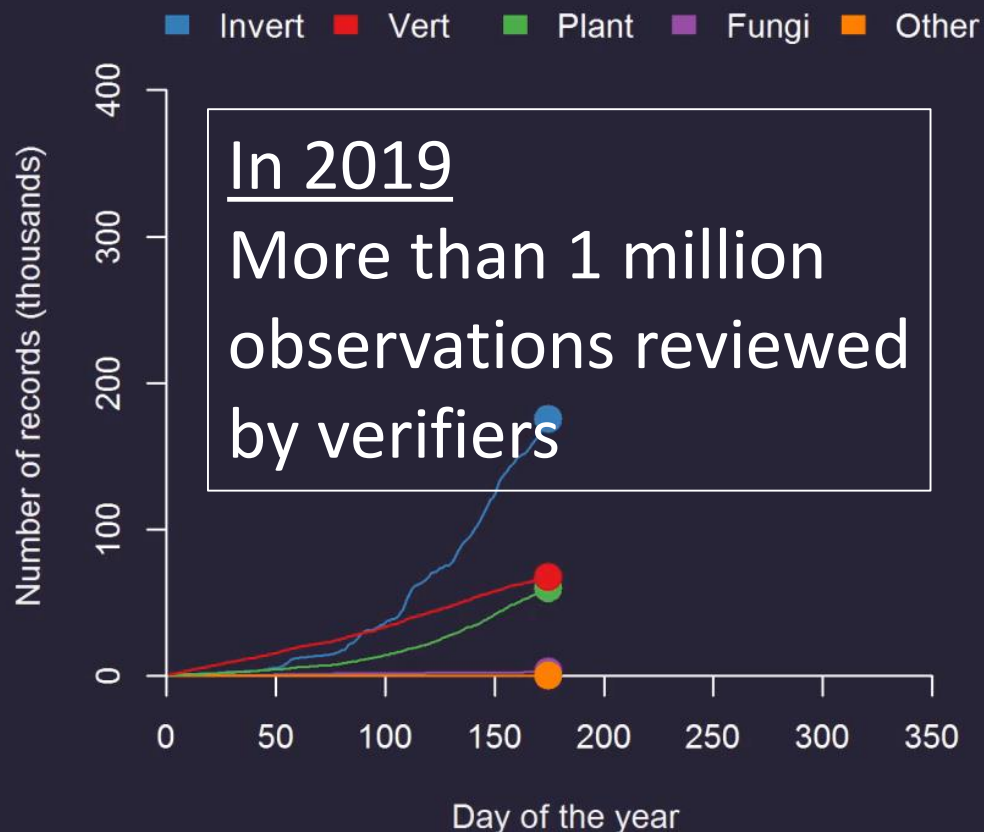

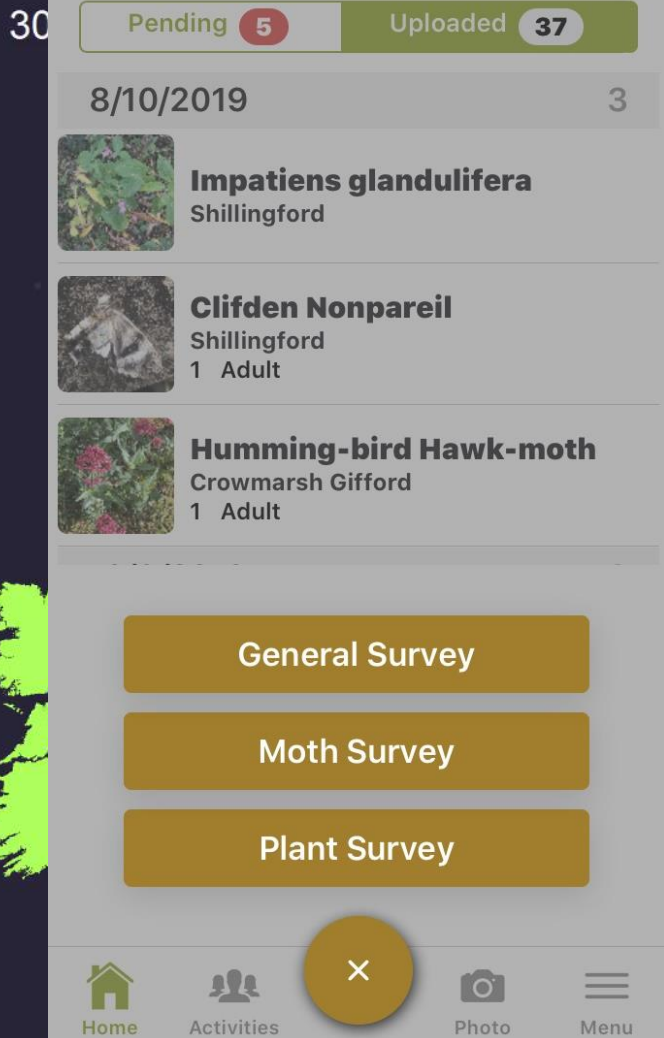

What is more we hope that others, in emulation of us, may investigate the spontaneous plants, each of his own area, more diligently so that in this way a complete Phytologia Britannica may finally appear from all their contributions (Ray, [1660](#); in the Preface to the Cambridge Catalogue; translated by Oswald & Preston, [2011](#)).

Outputs - websites

UK Beetle Recording

There are over 4000 species of beetle found in Britain, Ireland and surrounding islands. This website allows you to find out more about these fascinating insects, and provides a gateway for you to submit and manage your beetle records.

[Centipedes](#)

British Myriapod and Isopod Group (BMIG) aims to actively develop identification, training and recording relevant to improving the knowledge and conservation of centipedes, millipedes, pauropods & symphylans (the Myriapoda) and woodlice & waterlice (the Isopoda) found in Britain and Ireland.

Recording Schemes

The group is responsible for three National Recording Schemes, one each for centipedes, millipedes and woodlice & waterlice.

Publications

The BMIG Newsletter is produced twice a year and the more formal BMIG Bulletin is published annually.

Field Meetings

We hold an annual field meeting to which all are welcome, beginners and experts alike.
